Generating UCC 128/MH10 labels/SSCC IDs for the Online Assortment Program

The Canadian Tire Corporation, Limited (CTC) requirements for labels are outlined in the [Supplier Reference Guide](#).

The Rithum platform does not offer shipping label generation as part of their service offering. Suppliers must determine how best to meet the packaging label requirements based on their internal capabilities.

For example, some suppliers use third-party subscription service/software (for example, ShipStation). Third-party packaging/label creation software can potentially be integrated into a supplier's internal processes, EDI, or API solutioning so that once an order is picked the information can flow to the packaging software to produce the required labeling and information in order to be compliant with CTC's Online Assortment Program specifications.
